

Recommending attending SIGGRAPH 2015

Posted June 16, 2015

We cover 3D in unique ways which are not written about elsewhere. Plus Dr Nicholas Hellmuth lectures around the world on 3D printing. However our focus is far beyond "3D printers" since to create eye-catching 3D signage your image has to be life-sized. 99% of the 3D printers can't produce more than a few inches in height. So Dr Nicholas has been reviewing and writing about every other technology to produce real 3D signage. In fact he has been lecturing on this topic and/or writing for trade magazines about 3D production in USA, Africa, and Dubai.

Of course we are also interested in 3D graphic design for future animation, which is one of many reasons why we will be writing about what is great to see at SIGGRAPH 2015.

SIGGRAPH 2015,
conferences, 9-13 August 2015
Exhibition, 11-13-August 2015
